DL_Delivery — Staff Guide

Step-by-step instructions for checking supplier deliveries and recording differences • Version 1.0

1. Open Delivery

Sign in to WSC. From Home select DL – Delivery. Open deliveries may appear under the Delivery button, where you can return to the relevant record.

2. Start a new delivery

Under Start New Delivery, select Upload Supplier Invoice. Choose the supplier invoice file (PDF or supported image), then press Start New Delivery.

3. Check the extracted invoice details

WSC opens DL – Delivery Review. Check the extracted Invoice Number and Invoice Date against the supplier document. Review the listed products and invoiced quantities.

> The app is designed to retain extracted delivery details rather than keep the original supplier invoice. Keep your supplier’s original invoice in the normal company records, outside WSC.

4. Check each delivered product

In Products to Check, locate an item in the list or use Search invoice SKU and Find SKU. Physically count the goods received and enter the actual quantity in the relevant product entry.

5. Record shortages and differences

Compare the actual quantity received with the invoice quantity. WSC displays delivery totals for Total Invoice Quantity, Total Actual Quantity and Total Missing Quantity. Investigate unexpected differences before confirming.

6. Add a product not listed on the invoice

If an item arrived but is absent from the invoice, use Add Product Not on Invoice. Enter or scan its SKU, select Find Product, enter Quantity Received, and select Add to Delivery.

> Do not invent a SKU to make a delivery balance. If a product cannot be found, ask a supervisor to check the item and invoice.

7. Confirm the delivery review

When the invoice details, product quantities and differences have been checked, use Confirm to Review and follow the on-screen confirmation. Do not confirm until the figures match what was physically received.

8. Find or resume a delivery

From DL – Delivery, use the delivery search controls to locate an existing delivery by its DL number. Check the result before continuing.

9. Finish and check the delivery

Use the available Finish Delivery action when all checks are complete. Review the final delivery record or report and follow company procedure for any missing items.

> If an expected action is missing or the app reports an error, stop rather than creating a duplicate delivery. Tell the administrator the DL number and what happened.

Final checklist: Correct supplier invoice • Invoice details verified • Every line checked • Extra products recorded • Shortages investigated • Delivery confirmed and finished.
