SC – Stock Count | Staff Guide

Starting, counting, reviewing and finishing stock counts • Revised October 2026

1. Open Stock Count

Sign in to WSC and select SC – Stock Count on Home. When an SC session is open, its button is yellow; expand it and select Resume. When no SC session is open, the button remains blue.

2. Start a new stock count

On the SC screen select Start New Stock Count. WSC assigns an SC reference, such as SC-000002. SC is separate from ST and must retain its own report number.

3. Find the product

Select Scan QR Code or enter the SKU manually and press Find Product. Verify the SKU and product name before counting.

4. Save the physical count

Enter the physically counted quantity in Actual Qty, compare it with the displayed QuickBooks quantity and save. Continue with the next product as needed.

> Always check that you are working in the correct SC session. A stock count must not accidentally be saved against an ST reference.

5. Review and amend

Choose Review Products Counted to inspect the current SC items. Select Amend for a product requiring correction, enter the replacement actual quantity and save. Allow the loading indicator to finish.

6. Resume later

Return to Home and expand the yellow SC – Stock Count button. Choose the correct SC reference to continue. The separate open-session sections previously shown on Home have been removed.

7. Cancel a mistaken session

Use the available cancellation action if the stock count should not continue. After successful cancellation, the Home button should refresh and return to blue if no other SC session remains.

8. Finish the stock count

Once everything has been reviewed, use Finish Stock Count. Follow the on-screen confirmation and report options. Do not finish until the recorded quantities have been checked.

> The existing rule blocking a new report while another incompatible stock report is in progress still applies.

9. Find an SC report

Open Reports and select the SC report search. Available search choices include Stock Count Number, Date Range, Counted by and SKU. Enter the relevant information and generate the report.

10. Check report details

Verify the SC reference, product details, actual quantities and any differences. Investigate unexpected figures before any accounting adjustment.

11. QuickBooks submission — authorised staff only

Where an SC report offers a QuickBooks commit action, it must only be used after approval. SC adjustments use the designated stock shrinkage configuration, separate from the ST process. Confirm successful submission before treating it as complete.

> The Home screen can show Outstanding QB Commitments for finished reports awaiting submission. Do not submit twice or test against live QuickBooks.

> Final checklist: Correct SC reference • All counts recorded • Amendments reviewed • Session finished • SC report checked • QB action approved if required.
