ST – Stock Take | Staff Guide

Starting, counting, reviewing and finishing stock takes • Revised October 2026

1. Open Stock Take

Sign in to WSC. On Home, select ST – Stock Take. A yellow ST button means an open stock take exists. Expand it to view the session and use its Resume option. A blue button means no open ST session is currently shown.

2. Start a new stock take

On the ST screen select Start New Stock Take. WSC creates a numbered session, such as ST-000004. Keep this reference for any later review or report search.

3. Find and count a product

Use Scan QR Code, or type the SKU and press Find Product. Check the product and QuickBooks stock quantity shown. Enter the quantity physically counted as Actual Qty and save. The displayed difference helps you spot discrepancies.

> Check the product and actual quantity before saving. The system records who counted the item and when.

Starting, counting, reviewing and finishing stock takes • Revised October 2026

4. Continue counting

After a successful save, use Scan Next Product or enter another SKU. Repeat until all required items are counted.

5. Review and amend counts

Choose Review Products Counted to see items recorded in this session. If a figure is incorrect, select Amend, enter the corrected actual quantity and save. Wait for the loading indicator to finish before pressing another control.

6. Resume an unfinished stock take

Return to Home. If ST is yellow, expand the button and choose the correct ST session to resume. The session reference and item count help identify it.

7. Cancel a stock take if necessary

If the session was started in error, use the available cancellation action and confirm it. After a successful cancellation, the Home button should refresh: it returns to blue when no other open ST session remains.

> WSC prevents starting another stock report while an incompatible report is already in progress. Do not try to bypass that restriction.

8. Finish the stock take

Once the counted products and amendments are correct, select Finish Stock Take. The session becomes finalised. Follow the on-screen prompt to view the ST report.

9. View and check the report

Open the report from the completion prompt or under Reports. Check the ST number, products, counted quantities and differences. ST reports can also be searched by stock take number or the available date filters.

10. QuickBooks submission — authorised staff only

A finished ST report may show Commit to QB. Do not use it until the report has been checked and approved. Once committed, the button should indicate Committed to QB and the final PDF may be available.

> Outstanding QB Commitments on Home may show completed, uncommitted reports. Production QuickBooks must not be used for practice submissions.

> Final checklist: Correct ST reference • All products counted • Amendments checked • Session finished • Report reviewed • QB submission approved if required.
